INTRODUCTION

Hydrogen peroxide is the most widely accepted sterilant for aseptic packaging applications. Its environmentally-compatible properties are of particular benefit in food applications: it decomposes into water and oxygen, leaves little or no residue and, unlike some other more traditional chemical disinfectants, does not form harmful byproducts. Hydrogen peroxide’s antimicrobial performance, its ease of handling and its low dry residue makes it the sterilant of choice for aseptic systems.

APPLICATIONS

INTEROX® AG SPRAY 35-S Grade hydrogen peroxide is of very high purity. It has a very low dry residue level making it particularly well suited for use in spray and vaporization style hydrogen peroxide machines. It reduces nozzle plugging and leaves little or no residue on vaporizer surfaces. This ensures optimum heat transfer throughout the production run, ensuring consistently high vaporization rates and dependable vapor concentrations, resulting in high sterilization efficiencies and easier maintenance.

SPECIFICATIONS

INTEROX® AG SPRAY 35-S Grade Hydrogen Peroxide is a higher-purity aseptic packaging grade hydrogen peroxide with higher performance stabilizers specially formulated for spray and vapor hydrogen peroxide applications. INTEROX® AG SPRAY 35-S Grade Hydrogen Peroxide has a suitable status under the Federal Food, Drug, and Cosmetic Act, as implemented by FDA in C.F.R. Title 21, and is also registered with EPA, as required under the Federal Fungicide, Insecticide, and Rodenticide Act, for use as a sterilant/antimicrobial on aseptic food packaging material. It is a clear, colorless liquid with a density slightly higher than that of water and is miscible with water in all proportions.

AVAILABILITY

INTEROX® AG SPRAY 35-S Grade Hydrogen Peroxide is available in 4,200-gallon bulk tanker truck, 330-gallon HDPE tote tank or 55-gallon HDPE drum quantities from our Solvay Chemicals’ La Porte, Texas production facility. For more information, or to place an order, please contact Solvay Chemicals Customer Service at 1-800-443-2785.

STABILITY

INTEROX® AG SPRAY 35-S Grade Hydrogen Peroxide loses less than 1% assay per year if stored in approved materials of construction, away from sources of direct heat and sunlight. The decomposition is accelerated by heat and decomposition catalysts, such as transition metals and their compounds, strong acids and strong alkalis. Metals such as iron, copper, chromium, nickel, other non-ferrous metals and their salts and oxides have a strong,
catalytically decomposing effect on hydrogen peroxide. During decomposition, large quantities of oxygen can form, posing a fire danger if the product comes into contact with combustible materials.

Detailed information on this topic can be found in our Safety and Handling brochure and in our Safety Data Sheet, which is available on our website at www.solvaychemicals.us.

Aseptic packaging systems constructed of stainless steel must be passivated before contact with hydrogen peroxide. This process further stabilizes hydrogen peroxide, reduces the rate of metallic leaching and slows the formation of residue. Contact your Solvay Chemicals’ representative for additional information about proper passivation of stainless steel surfaces.

IDENTIFICATION
Hydrogen Peroxide H₂O₂
Molecular Weight 34
CAS Number 7722-84-1

STORAGE AND HANDLING
• Store hydrogen peroxide in the original vented container, upright, in a cool, ventilated area where it is protected from damage, or in bulk storage tanks made from approved alloys of stainless steel.
• Do not store other chemicals, fuels, or combustible materials near hydrogen peroxide.
• Never return unused hydrogen peroxide to the storage container.
• When empty, rinse all peroxide containers thoroughly with clean water before discarding.
• Use only approved material for pumps, piping, and hoses.

SAFETY
• Persons working with hydrogen peroxide should be familiar with personal protective equipment, first aid measures and the proper safety and handling procedures. Consult the Safety Data Sheet (SDS) for appropriate information.
• Prevent accidental decomposition by keeping the product free of contaminants.
• Prevent fires by avoiding accidental spills. Water is the preferred method for extinguishing fires in which hydrogen peroxide is present.
• Spills and leaks should be contained, diluted with copious amounts of water and disposed of in compliance with local regulations.
• Hydrogen peroxide storage or handling areas should be equipped with a safety shower, an eyewash station, and a water hose.

FIRST AID
In case of product splashing into the eyes and face, treat eyes first.

• **Eye contact:** Flush eyes immediately with water for at least 15 minutes. Call a physician.
• **Skin contact:** Immediately flush skin with water while removing contaminated clothing and shoes. Call a physician if irritation persists.
• **Inhalation:** Remove the victim from the contaminated area to fresh air. Call a physician in case of respiratory symptoms.
• **Ingestion:** Drink large quantities of water and do not induce vomiting. Consult with a physician immediately in all cases.

**Danger:** Hydrogen peroxide solutions are strong oxidizers and corrosive to the eyes, mucous membranes and skin. Consult the SDS for the appropriate Personal Protective Equipment to wear when handling hydrogen peroxide. In case of contact with the eyes, skin or clothing, flush with large amounts of water for 15 minutes. Product in contact with combustible materials may cause fires.

**Before using, read Safety Data Sheet (SDS) for this chemical.**
